

Feedback (Prepared by Prof. Sajjad Hussain) from the midterm presentations and reports. Please implement in your final presentations and report:

- Don't read from paper-notes, devices or slides during the presentations.
- Try to keep a good eye-contact with the examination panel
- Speak at a balanced volume—neither too loud nor too quiet
- Use Slide Show mode for presentation
- Add page numbers on slides
- Give appropriate titles to the diagrams
- Keep a good balance of text on slides – not too little, not too much
- For graphs, put legends for the curves, and label axes with appropriate units
- Only give key piece of code in the presentation/main report, if you feel the necessity to include the code
- Proofread the presentation/report to avoid any sort of typos, grammatical mistakes, etc.
- Have a conclusion slide and don't end the presentation abruptly
- Make sure that everything on the slide and report is properly readable
- Use colours with good contrast to make the text resalable. Avoid colours like green, red, etc.
- Many templates include some non-relevant images. Don't use any images on the slides that are not relevant to the topic
- Avoid hand-drawn sketches in presentation and reports
- Don't put the figures without citations and discussion. You need to discuss each figure in the report
- Understand the marking the criteria and prepare your presentation and report following the criteria, always aiming the 'excellent' category
- Ensure to stay within the allocated time - practice before presentation and avoid frequent switches among the presenters to keep up with the time
- Some reports don't reflect the work presented during presentations. Please ensure both the report and presentation are presenting the same content
- And finally, remember outsourcing design and build for the project is not allowed and may result in significant penalties!

All the best with the rest of your project and demonstration.
