

General Rules - TDPS (UESTC3010) oral presentations

Final oral presentations will take place during the week starting Monday 8 June and ending Friday 12 June 2026. The final schedule will be available under the “Files” tab of the General channel in Teams. Please **check** your time slot and ensure that you and your team members are present and ready at least 10 minutes before your allocated time. **All** team members must participate in the presentation. The assessment will include a group presentation, an individual presentation, and a question-and-answer session for each team member.

During the assessment, each team will have a **45-minute time slot**, divided as follows:

5 minutes for the group presentation, where one team member will provide an overview of the project and its outcome. This should consist of 3–5 slides summarising your project. Remember that the task description is already known, so there is no need to repeat it. You may include an image of the car on the first slide and explain your chosen sensors and overall design approach (including chassis, battery, motors, microcontroller, and sensors), as well as how the car performed during the final demo. You should also reflect on the most rewarding and most challenging aspects of the project and explain how you would address these challenges in the future. Essentially, this should be a summary of what you have learned from the project.

For the **individual part**, each team member will have **3 minutes** to present their technical contribution, using a maximum of three slides. This will be followed by a **5-minute** question-and-answer session. You are encouraged to use images, as they will help improve understanding. You should avoid reading directly from notes, as this can reduce clarity; however, using bullet-point notes is acceptable. Every team member must deliver a presentation, as marking is individual. Your presentation should be coherent and clearly communicated to the audience. The marking criteria are available on Moodle.

Please ensure that the slides are well structured and cover the entire project. For consistency and to save time, all slides must be combined into a **single slide deck** and presented from one computer, to avoid switching between devices during the presentation. Please ensure your presentation is saved on a USB stick and ready to be transferred to the assessment room computer upon arrival at your allocated time slot.

You **must arrive 10 minutes** before your allocated time slot so that the session can start on time.
